

Introducing Altura Learning's NANO videos

Bite-sized, highly engaging videos deliver efficient and effective content that resonates with the modern learner.

NANO videos are designed to complement existing courses and provide learners with the quick reference information on-the-go.

Visual Learning Reinvented: Rich visuals, animated or live action real-world scenarios, and expert insights create an immersive learning experience.

Concepts are explained concisely through images, narration and text on screen, making complex topics easy to understand.

Time-Efficient: NANOs are short (2-4 minutes) each but packed full of information. Designed as just-in-time content, each video ensures that even a few spare minutes can be transformed into productive learning moments.

Anywhere, Anytime Access: Whether you're at home, in transit, or onsite, our NANO videos are accessible from any device with an internet connection.

Enhanced Retention: The dynamic blend of visuals, audio, and concise content in our NANO videos will empower learners to retain and apply their knowledge effectively.

Comprehensive Curriculum: NANO videos cover a wide range of crucial topics, from person-centered care, to hand hygiene and much more.

How are NANO videos different than Altura Learning courses?

A traditional Altura Learning course covers comprehensive topics and provides in-depth information, learning outcomes, learning resources, activities and assessments. They typically take approximately 30 minutes to complete. NANOs are short, 2 -4 minutes and are intended to be an added-on bonus, designed to complement larger courses, not replace them.

Benefits of NANO videos

- Learners can access the content they need at exactly the right time
- Maximise the time staff can spend on frontline care – they help organisations to provide on-time learning when it is needed, in a much shorter space of time
- Provide short summaries of new guidelines or legislation
- Useful as content refreshers at handover, Toolbox Talks and other education sessions or to prime skill readiness before training.
- Support ESL learners to absorb information more efficiently and increase accessibility to learning content
- Enable learners with different learning styles and levels of literacy the ability to focus on one topic or concept at a time, leading to greater engagement and improved retention of information in comparison with other course formats.

Who are NANO videos intended for?

The short answer is – **EVERYBODY**. However, NANOs will be particularly useful for learners who want to build on existing knowledge, need a refresher on technique prior to meeting a client/resident, in response to an incident or risk being identified and educators who require quick training revision or on-time learning resources.

Accessing NANO videos

NANO videos are available via SCORM, using the Bridge LMS or the organisation's LMS and new ones will be added monthly.
